15

#### Preparation 1

3-Amino-5-chloro-2-mercaptopyridine (18.8 g) was added to an ice-cooled solution of phosgene (30 g) in toluene (350 ml). 10% Aqueous solution of sodium hydroxide (300 ml) was added dropwise to the stirred mixture for a period of 1 hour below 20°C. The final mixture was stirred for 1.5 hours at ambient temperature and then stirred for an additional hour at 50°C. After cooling, the aqueous layer was adjusted to pH 4.0 with 4N hydrochloric acid. ### Example 15

A solution of 5-chloro-3-[(4-amino-1-piperazinyl)-carbonylmethyl]-2-benzothiazolinone (5.0 g) and 37% formaldehyde solution (1.38 ml) in acetonitrile (150 ml) was stirred for 1.5 hours at room temperature. The reaction mixture was concentrated under reduced pressure. The residue was subjected to column chromatography on silica gel (50 g) eluting with a mixture of chloroform and methanol (50:1). The fractions containing the desired compound were combined and concentrated under reduced pressure. The residue was recrystallized from ethanol (200 ml) to give colorless crystals of 5-chloro-3-[(4-methyleneamino-1-piperazinyl)carbonylmethyl]-2-benzothiazolinone (5.1 g).

A mixture of 5-chloro-3-[(4-methyleneamino-1-piperazinyl)carbonylmethyl]-2-benzothiazolinone (5.09 g), sodium borohydride (284 mg), tetrahydrofuran (80 ml), and ethanol (70 ml) was stirred for 3 hours at room temperature. The reaction mixture was concentrated under reduced pressure and the residue obtained was purified by column chromatography on silica gel eluting with a mixture of chloroform and methanol (20:1). The fractions containing the desired compound were combined and concentrated under reduced pressure. The white residue was dissolved in chloroform (5 ml), and 20% solution of hydrogen chloride in ethanol (1 ml) was added to the above solution. The white precipitates were filtered and recrystallized from a mixture of ethanol (10 ml) and water (2 ml) to give colorless crystals of 5-chloro-3-[(4-methylamino-1-piperazinyl)carbonylmethyl]-2-benzothiazolinone hydrochloride (0.5 g).

### Example 23

15 (1) Piperazine (86.14 g, 1 mol) was dissolved in  
a cooled mixture of acetic acid (300 g) and water (430  
ml). To this solution was added dropwise a solution  
of sodium nitrite (69 g, 1 mol) dissolved in water  
(172 ml) at 10°C, and the reaction mixture was stirred  
20 for an hour at the same temperature. Then zinc powder  
(172.3 g) was added to the solution containing  
1-nitrosopiperazine by portions below 40°C, and after  
addition, the reaction mixture was stirred for additional  
an hour and filtered. The cake of zinc was washed with  
25 water (172 ml), and benzaldehyde (106.1 g) dissolved in  
424 ml of ethanol was added to the combined solution  
containing 1-aminopiperazine of the filtrate and washings.  
After stirring for an hour at room temperature, ethyl  
acetate (1034 ml) and ammonium chloride (281.4 g) was  
30 added to the mixture and the pH was adjusted to 9.50 with  
6N sodium hydroxide solution. The insoluble materials  
in the organic layer was filtered off, and the aqueous  
layer was extracted again with ethyl acetate (690 ml).  
The combined extract containing 1-benzylideneaminopiperazine  
35 was dried over magnesium sulfate, and after filtration,

magnesium sulfate was washed with 300 ml of methylene chloride and the washings were combined with the filtrate.

5           (2)       To a suspension of 3-carboxymethyl-5-chloro-  
2-benzothiazolinone (121.84 g, 0.5 mol) in a mixed  
solvent of methylene chloride (610 ml) and dimethyl-  
formamide (61 ml), was added thionyl chloride (61 g),  
and the mixture was stirred under reflux for an hour.  
10 To the solution of 1-benzylideneaminopiperazine  
obtained by the reaction (1) was added triethylamine  
(126.5 g), and the above-mentioned solution of the acid  
chloride dropwise below 0°C. After addition, the  
reaction mixture was stirred for an hour at the same  
15 temperature. The mixture was concentrated to one third  
volume and methanol (1200 ml) was added. The precipitates  
were filtered, washed with methanol (1200 ml) and dried  
to give 5-chloro-3-[(4-benzylideneamino-1-piperazinyl)-  
carbonylmethyl]-2-benzothiazolinone (189.0 g).
